

Revelación

Aluminium balustrade.

The functionality of some systems makes them classics over time. The timeless design of the Revelación aluminium balustrade makes it an ideal alternative for residential projects, as it allows for different designs by combining vertical uprights with glass infill, or vertical balustrade.

Features

- Several mounting options
- Possibility of combining full glazing with an intermediate rail
- Balustrade installation on the floor slab or on the front of the slab
- Tested in accordance with CTE for private and public use
- Level 5+5 safety glass

TECHNICAL FEATURES

◆ Design

The **Revelación** aluminium balustrade system has a clean, slimline look thanks to its balustrade and slender glass-filled pilasters. The reflection of the glass conceals the presence of the pilasters and is framed between the handrail and the lower support.

◆ Features

The **Revelación** aluminium balustrade is characterised by its simple shapes and versatility, as it is a system made up of pilasters fixed to anchoring points where the rest of the components are installed: handrails, glass, bars, etc.

◆ Benefits

This railing system has 5+5 glass, which means it offers the highest level of safety, both on the slab and at the front. It has also passed the CTE tests for private and public use with flying colours.

◆ Possibilities

The **Revelación** series has a multitude of mounting options. For glass, you can choose between full glass or with an intermediate rail, leaving the handrail free. Finally, the railing can be installed on the slab or on the front of the slab.

Maximum height	1100 mm
Mounting	Side (front of slab) Top (above slab)
Load (CTE)	0,8 kN/m 1,6 kN/m
Projects	Private Public
