

Iconic

Handle for sliding systems

The Iconic handle for sliding systems offers a unique combination of versatility and precision, with an exclusive design developed by Exlabesa's R&D team.

The innovative dual interchangeable spindle system allows for compatibility with both standard multipoint locks and multipoint locks with micro-ventilation, adapting to different types of installation and usage requirements.

The pre-assembled spindle allows a 180° rotation of the lever and 90° of the spindle, enabling the lever to adopt a vertical position when opening the sash on standard systems.

Meanwhile, the standard spindle offers three functional positions - closed, open and micro-ventilation ensuring more precise and secure operation on multipoints with micro-ventilation.

With the Iconic, every operation is comfortable, safe and elegant.

Features

- System with two interchangeable spindles, compatible with standard multipoint systems and micro-ventilation
- Option of pre-mounted or standard spindle: vertical lever position in standard systems or three positions in systems with micro-ventilation
- Compatible with the CFS-65, S-LIM, CRS-140, CRS-77 and CRS-77 eLite series
- Sophisticated design, developed within the exclusive Iconic Line
- Available in white, black, RAL colours, silver anodised, stainless-steel anodised and silver lacquered finishes, adapting to the style of any installation

TECHNICAL CHARACTERISTICS

Design

The new handle for sliding systems features a sober and contemporary design, following the exclusive Iconic range developed by our R&D team. Its wide variety of finishes ensures perfect aesthetic coherence with the rest of the joinery, enhancing the overall style of the installation.

Structure

Configured with a system of interchangeable spindles that allows use with both standard multipoint systems and multipoint systems with micro-ventilation, this handle facilitates adaptation of the locking mechanism to different configurations.

Performance

The system guarantees smooth and controlled operation, offering a vertical lever position in standard configurations and three functional positions when used with micro-ventilation, enhancing the user experience.

Compatibility

Iconic is compatible with the CFS-65, S-LIM, CRS-140, CRS-77 and CRS-77 eLite series, providing versatility and ease of integration across a wide range of sliding systems.
